

Amazon Lookup v1.0

AppleScript for iTunes

written by Josh Thomas

Find more **free** AppleScripts
and info on writing your own
at Doug's AppleScripts for iTunes.

This script will look at iTunes current selected track and take you to Amazon's web page for that track's Album. If nothing is selected, it will default to the current playing track. If nothing is playing it will not run.

This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. [Click here for more info.](#)

Installation:

If you installed the files from the downloaded disk image by dragging them to the "Installer", then the AppleScript and this Read Me document have already been installed in your *[user name] > Library > iTunes > Scripts* folder. The script will appear in iTunes' Script menu, where you can activate it by clicking on its name.

To manually install, if necessary: Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

How to use:

Run the script while a track is selected or a track is playing. An Amazon search for the track's Album will be initiated using your default browser. (Note that searches are not always successful.)
