

# Delete m3u Files v1.0

## AppleScript for iTunes

Find more **free** AppleScripts  
and info on writing your own  
at Doug's AppleScripts for iTunes.

This script will locate .m3u files ("Internet Audio Playlists") and allow you to select which ones you'd like to delete. Requires Mac OS 10.4 or better; your system should be indexed with Spotlight.

**This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. Click here for more info.**

### Installation:

**To manually install:** Put AppleScripts in your iTunes Scripts folder. This is located in *[user name]* > *Library* > *iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

### How to use:

Run the script and in a few moments any ".m3u" files found will be listed in a choose box. Select the ones you want to delete and click on "OK".

- I am an eMusic user and Previews from their collection come down as .m3u files. After a lot of previewing, these .m3u's tend to pile up. This script is a simple way of removing them.
- Unfortunately, I was unable to find a correlation between specific ".m3u" files and their associated tracks in iTunes. So you may also wish to try the script Delete 'Continuous' Tracks which removes tracks in iTunes of the kind "MPEG audio stream", which are tracks associated with the ".m3u" files.
