

# Divvy Up For DVDs v2.0

## AppleScript for iTunes

Find more **free** AppleScripts and info on writing your own at Doug's AppleScripts for iTunes.

This script will create DVD-sized (no greater than approximately 4.37GB) playlists from a selection of tracks or the tracks in a selected playlist in preparation for burning.

**This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. Click here for more info.**

### Installation:

**To manually install:** Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

### How to use:

Select some tracks or an entire playlist and run the script. This screen will appear:

Enter a name that will be used as the basis for the playlists. The text you enter will be appended with " - Disc *n*", where *n* is the sequential disc number. Remember that when you burn a playlist to DVD the playlist name is used for the DVD name.

Click the **Proceed** button, or...

If you click the **To Folder** button, the newly-created playlists will be moved to a **new folder** whose name will be the base name you entered in the dialog box. Thus, in this example, the folder would be named "Duchess of Duke Street - Season 1" and the playlists it contains would be named "Duchess of Duke Street - Season 1 - Disc 1", "Duchess of Duke Street - Season 1 - Disc 2", and so on.

In a few moments, the tracks will be distributed to new DVD-sized playlists, ready to burn.
