

Drop to Make M4V Movies

v1.0

AppleScript for iTunes

Find more **free** AppleScripts and info on writing your own at Doug's AppleScripts for iTunes.

This AppleScript "droplet" will convert movies to ".m4v" (H.264) using QuickTime Pro, save them to your "Movies" folder, and then add them to iTunes.

Requires QuickTime Pro 7.0.3 or higher and iTunes 6 or higher.

This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. [Click here for more info.](#)

Installation:

To manually install: Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

This is an AppleScript "droplet" which can be placed in accessible place on your computer.

How to use:

Drag movies to the droplet's icon and--if possible--they will be converted to H.264 movies, saved to your "Movies" folder, and added to iTunes.

Notes:

- Not all movie types are exportable as H.264. Those which cannot will be skipped.
