

Filenames to Song Names

v2.0

AppleScript for iTunes

Find more **free** AppleScripts and info on writing your own at Doug's AppleScripts for iTunes.

This script will rename the selected tracks in iTunes with their filenames (minus the extension).

This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. Click here for more info.

Installation:

To manually install: Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

How to use:

Select some tracks in iTunes and run the script. Each track's filename will be copied to its Song Name.

- The extension of the file will **not** be included in the Song Name. Doing so may cause a bizarre loop where the filename will be renamed using the extension *again*. Fixing this is beyond the scope of this simple script.
- There is no accounting for track numbers that may prefix the filename. To remove characters from the beginning of your Song Names try using the script **Remove n Characters From Front**.
