

# List MIAs v1.2

## AppleScript for iTunes

Find more **free** AppleScripts  
and info on writing your own  
at Doug's AppleScripts for iTunes.

This script checks your entire iTunes music library for missing (and presumed "dead") tracks—those that iTunes is unable to associate with a local file and which are listed in iTunes with a "!".

The script then creates a text file listing any tracks MIA, and the playlists they're *supposed* to be in, which you can view using TextEdit.

**This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. [Click here for more info.](#)**

### Installation:

If you installed the files from the downloaded disk image by dragging them to the "Installer", then the AppleScript and this Read Me document have already been installed in your *[user name] > Library > iTunes > Scripts* folder. The script will appear in iTunes' Script menu, where you can activate it by clicking on its name.

**To manually install, if necessary:** Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

### How to use:

Run the script. Each track in your Music/Main Library will be checked for its "location" property. If this value is "missing value", the track will be output to a text file.

To clear these tracks from iTunes, try using the AppleScript Super Remove Dead Tracks.
