

Locate Copies of Current Track

v1.0

AppleScript for iTunes

Find more **free** AppleScripts and info on writing your own at Doug's AppleScripts for iTunes.

Displays a list of playlists which contain a copy of the *currently* playing iTunes track. (This is a Retro Script; iTunes can now accomplish this--press Command-L while a track is playing, Control-click the track, select "Show In Playlist" from the pop-up menu.)

This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. [Click here for more info.](#)

Installation:

If you installed the files from the downloaded disk image by dragging them to the "Installer", then the AppleScript and this Read Me document have already been installed in your *[user name] > Library > iTunes > Scripts* folder. The script will appear in iTunes' Script menu, where you can activate it by clicking on its name.

To manually install, if necessary: Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

How to use:

While a track is playing, run the script. After a few moments, it will display the names of the playlists which contain the currently playing track (these will be tracks which represent the same audio file).

- The playlist the current track is in will be hilited in the list.
- Any Smart Playlists that contain the track will have a "*" (asterisk) following their names in the list.
- The iTunes Music Store "Purchased Music" Playlist and any shared Playlists will be ignored.

Note that the search is performed among playlists on the current *Source*. For example, the script will report copies of the current track on iPod only if the current track is playing from the iPod.
