

# Make JPEG and PNG Playlists

## v2.0

For iTunes 11+/OS X 10.8+  
Find more free AppleScripts  
and info on writing your own  
at Doug's AppleScripts for iTunes.

This script will create two playlists populated with Music library tracks that contain, respectively, JPEG artwork and PNG artwork.

**OS X 10.8 and later only.**

This script is Donationware. If you use it and like it please consider making a donation to support my AppleScripting efforts. [Click here for more info.](#)

## Installation:

This script is a **Cocoa-AppleScript applet** and can be run by double-clicking its icon in the Finder. However, it is probably best accessed from the iTunes Script menu.

Put AppleScripts in your iTunes "Scripts" folder. This is located in your *[user name] / Library / iTunes /* folder.

*The user Library directory is hidden by default. To make it visible, hold down the Option key on your keyboard and select **Go > Library** from the Finder.*

If there is no folder named "Scripts" in the *[user name] / Library / iTunes /* folder then create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

**See the online Download FAQ for more info and video on downloading and installing AppleScripts.**

## How to use:

Launch the script and wait as each Music library track is examined and copied to either a “\_Artwork is JPEG” or “\_Artwork is PNG” playlist. The name of each playlist will be appended with the track count of the playlist.

It can take a few minutes to go thru each track of the Music library so be patient as each playlist is populated with tracks.
