

# Music Folder Files Not Added v1.1

This application will list the file paths of the files in your designated "iTunes Music" folder which are not in iTunes' library. Additionally, you can select a parent folder and *its* contents will be compared to the iTunes library. Options to Add a selection of found files to iTunes or move them to the Trash.

**This application is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. Click here for more info.**

## Installation:

**To manually install:** This application can be placed anywhere you find it easily accessible. However, it is probably most easily accessed when it and its accompanying "Music Folder Files Not Added.rtf" and "Launch MFFNA.scptd" are placed in your `[username]/Library/iTunes/Scripts/` folder.

The "Launch MFFNA.scptd" will then appear in the iTunes script menu and you can use that script to activate the application.

## How to use:

Run the application.

**Find** - Compare the files in your designated "iTunes Music" folder against the tracks in iTunes' library and list the file paths of the files which are not in iTunes.

**Find Other...** - Select a parent folder in another location, then compare the files in it (at every folder level) against the tracks in iTunes' library and list the file paths of the files which are not in iTunes.

## Note:

**Perhaps this goes without saying but, just because a file is listed doesn't preclude the possibility that a *copy* of it *somewhere else* may be in the iTunes library; just that the file *listed* is not in the iTunes library.**

**Add** - Select items in the list and click the Add button to add them to iTunes.

**Trash** - Select items in the list and click the Trash button to move them to the Trash. They will not be deleted until you empty the Trash.
