

# MusicOutfitter Search v1.1

## AppleScript for iTunes

Find more **free** AppleScripts  
and info on writing your own  
at Doug's AppleScripts for iTunes.

This script will let you use tag data (Artist, Album, or Song Name) from the selected or playing track in iTunes as the criteria for a search of the MusicOutfitter site. MusicOutfitter sells CDs and also provides album artwork and lots of album, artist, and track information\*..

**This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. [Click here for more info.](#)**

### Installation:

If you installed the files from the downloaded disk image by dragging them to the "Installer", then the AppleScript and this Read Me document have already been installed in your *[user name] > Library > iTunes > Scripts* folder. The script will appear in iTunes' Script menu, where you can activate it by clicking on its name.

**To manually install, if necessary:** Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

### How to use:

Select a track in iTunes and run the script. If no track is selected but one is playing than the playing track will be regarded as the selection.

A choose box will display the available tags from the track. Choose a tag and click "OK". The MusicOutfitter site will be searched and the results will be displayed in your default browser.

*\*Disclaimer: I have no affiliation with MusicOutfitter.com; I just like the site as a source of information.*
