

# Now Where Was I? v1.0

## AppleScript for iTunes

Find more **free** AppleScripts  
and info on writing your own  
at Doug's AppleScripts for iTunes.

Use this applet to start and quit iTunes: when run while iTunes is playing, it will remember the currently playing track and quit iTunes; when run next it will start iTunes and play the remembered track.

**This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. Click here for more info.**

### Installation:

**To manually install:** Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

### How to use:

**Note on location:** this applet can be run from anywhere on your computer by double-clicking it. You may want to assign it to the Dock to access it when iTunes is not running.

**To Quit and Remember:** While iTunes is running, activate the applet either by selecting it from iTunes' Script menu or double-clicking it in the Finder. If a track is playing in iTunes you can choose to have the applet "remember" it. iTunes will then quit.

**To Start and Play:** To play the "remembered" track, activate the applet while iTunes is not running. The applet will activate iTunes and then begin to play the track it "remembered" the last time it was used to quit iTunes.

If the applet is used to quit iTunes and no track is playing, nothing will be "remembered".
