

Podcast Analysis with Numbers v1.0

AppleScript for iTunes

written by John T. Hutten

Find more **free** AppleScripts
and info on writing your own
at Doug's AppleScripts for iTunes.

Exports track data from the Podcasts playlist to a Numbers document.

Installation:

To manually install: Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

How to use:

Open a new blank document in Numbers.app. Run the script. It will scan iTunes for Podcasts and create a Numbers document which contains the Podcast name, Episode Name, Size of File in MB, and the File Location. (The script can easily be changed to find other items as it is driven by the name of a Playlist.)

It prompts you at the end to set a highlight threshold value on the FileSize column and then pick the highlight color. It then sets the text color property for each cell in the FileSize column which is at or in excess of that threshold value.
