

Rescue Playlists from Folder v1.0

AppleScript for iTunes

Find more **free** AppleScripts and info on writing your own at Doug's AppleScripts for iTunes.

This script will extricate all of the playlists in a selected Folder at once by making a copy of each in the Source column and then deleting the original from the selected parent Folder.

This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. Click here for more info.

Installation:

To manually install: Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

How to use:

Select a Folder by clicking its name in the iTunes Source List and then run the script.

The script will report how many playlists it finds in the selected Folder. Click the "Rescue" button to proceed.

Each playlist will be copied and re-built in the Source List and then deleted from the selected Folder. Any sub-Folders in the Folder will be ignored. (You may want to use the script on the deepest-level sub-Folders first.)

When the script is finished, you have the **option** of deleting the selected Folder itself. **Note** that in this case any sub-Folders in the target Folder and any playlists they contain will also be deleted. Otherwise, you may prefer to delete the Folder manually later.
