

# Search Wikipedia v2.2

## AppleScript for iTunes

Find more **free** AppleScripts and info on writing your own at Doug's AppleScripts for iTunes.

This script performs a "Go" search of **Wikipedia** (like Google's "I'm Feeling Lucky") in your default browser using the Song Name, Album, Artist, or Composer tag of the single selected or currently playing iTunes track.

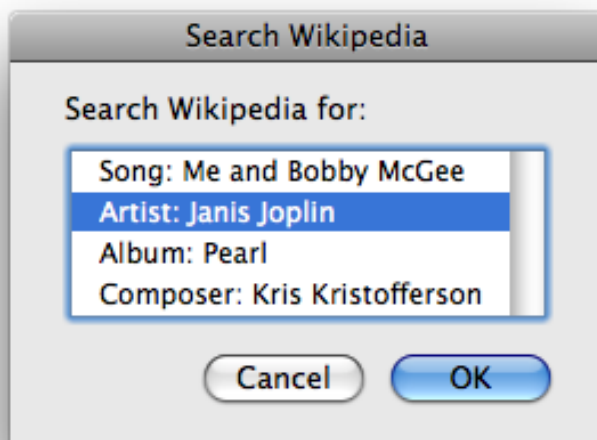

This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. [Click here for more info.](#)

### Installation:

**To manually install:** Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

### How to use:

While a track is playing or selected in iTunes, run the script. A choose box will appear, for example:

Click on the tag you wish to search Wikipedia with and click the "OK" button. In a few moments, your default browser will open a page at Wikipedia that (hopefully!) displays a fruitful result.

• **Radio streams** - if a radio stream is playing and the provider has formatted the stream title correctly, such that "Artist - Song Name" is available, the script will do a Wikipedia search for the current Artist name.

The Wikipedia search is actually a Wikipedia "Go" search, which attempts to locate the unique page whose title contains your selected search string.

If Wikipedia cannot locate such a page with your search string, it will display a page from which you can modify your search or select other options.
