AppleScript for iTunes

Find more **free** AppleScripts
and info on writing your own
at Doug's AppleScripts for iTunes.

This script copies the names of the Artist folder, Album folder and filename (minus the extension) of the selected tracks' file paths to each track's artist, album and song name tags, respectively.

For best results your files and folders should be arranged in this format:

...Preceding Folders / Artist folder / Album folder / filename.xxx

This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. [Click here for more info.](#)

Installation:

To manually install: Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

How to use:

Select the tracks you want to modify and run the script from iTunes' Scripts Menu. The script will alert you when it is finished modifying your tracks' tags.

Don't select every track in your Music library. This will likely be too much for the script to handle at one go.

Caveats:

- The filename's extension will be removed before applying to Song Name, however, track numbers which may precede the Song Name will remain (these can be removed with another script entitled "Remove n Characters from Front").
- Tracks whose files are missing (so-called "dead tracks", preceded by a "!" in the playlist) will be

skipped.
