

# Copy Track Info to CD Tracks

## v1.3

AppleScript for iTunes

written by John Paul Davis

Find more **free** AppleScripts  
and info on writing your own  
at Doug's AppleScripts for iTunes.

iTunes users converting their music libraries to m4a files from mp3 have discovered that iTunes's "Replace Existing" option works only if all the track info is identical.

This script will copy the relevant track info from the selected tracks to track info for a CD, so that the "Replace Existing" option will work properly.

**This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. [Click here for more info.](#)**

### Installation:

**To manually install:** Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

### How to use:

To run, insert the CD you wish to rip. Then select the tracks of the corresponding album in your iTunes Library. Run. the script.

Note: If you select a partial album (say you don't have every song from an album in you Library) the script will still work, and it will uncheck that track in iTunes so that it isn't imported.
