

Unplayed Albums to Playlist

v1.5

For iTunes 11+/macOS 10.12+
Find more free AppleScripts
and info on writing your own
at Doug's AppleScripts for iTunes.

This applet will scan the library for complete music albums that have not been played and copy them all to an “_Unplayed_Albums” playlist.

For macOS 10.12 and later only.

This app is free to try full-featured for 10 days. If you like it you can purchase a code for \$1.99 which will unlock the 10 day trial restriction. Launch the app and click "Register..." in the its File menu to make an in-app purchase through PayPal.

Installation:

This script is an **AppleScript applet** and can be run by double-clicking its icon in the Finder. However, it is probably best accessed from the iTunes Script menu.

Put AppleScripts in your iTunes "Scripts" folder. This is located at *[user name] / Library / iTunes / Scripts /*.

*The user Library directory is hidden by default. To make it visible, hold down the Option key on your keyboard and select **Go > Library** from the Finder.*

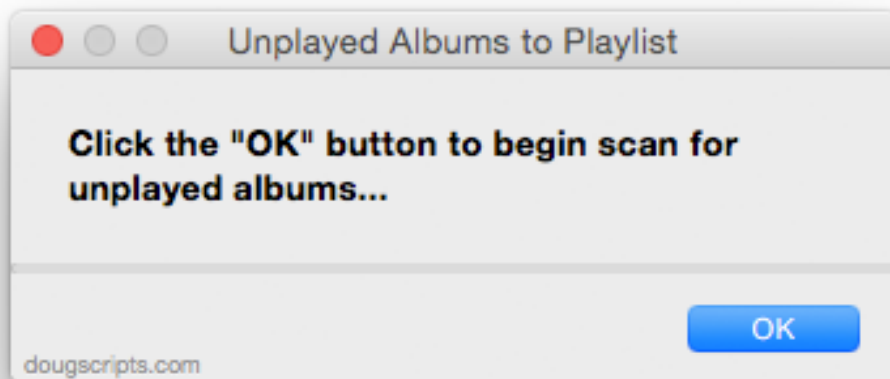

If the *[user name] / Library /* folder does not contain the "iTunes" or "Scripts" folders

then then create them and put the script(s) in the "Scripts" folder. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

See the online Download FAQ for more info and video on downloading and installing AppleScripts.

How to use:

Launch the applet and click the **OK** button.

In a few moments, any album for which all tracks have **0 plays** will be copied to a new playlist named “_Unplayed_Albums”.

The “_Unplayed_Albums” playlist will be recreated each time the applet is run. If you want to keep the current “_Unplayed_Albums” playlist then **rename** it before running the applet again.
