Access Stream Address v1.2

AppleScript for iTunes

Find more **free** AppleScripts
and info on writing your own
at Doug's AppleScripts for iTunes.

This script gets the internet address obtained from the currently playing URL track and displays it in a dialog text box so it can be copied to the clipboard or opened in your browser. Normally, you can see this info in iTunes in the track's Get Info window, but you cannot git at it.

Why? Sometimes the address will be the site of the stream, or some other kind of informative page. At the very least, you may be able to access portions of the URL via your browser.

This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. Click here for more info.

Installation:

If you installed the files from the downloaded disk image by dragging them to the "Installer", then the AppleScript and this Read Me document have already been installed in your *[user name] > Library > iTunes > Scripts* folder. The script will appear in iTunes' Script menu, where you can activate it by clicking on its name.

To manually install, if necessary: Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

How to use:

While a stream track is playing, run the script. A dialog box will show the URL address obtained from the stream track. You can choose to copy the URL to the clipboard or open it in your default browser.
