

Welcome to AgentMusic for iTunes - beta

AgentMusic for iTunes enhances Apple's iTunes application by providing next generation smart playlists based on music in your collection.

How to Use

- "AgentMusic Make Playlist Like" - select one or more tracks in your library and select the "AgentMusic Make Playlist Like" script from the iTunes Script menu. A new iTunes playlist will be created containing tracks by artists like the artist of the selected track.
- "AgentMusic Cluster Artists" - select the "AgentMusic Cluster Artists" script from the iTunes Script menu. iTunes will then generate a list of artists, cluster the artists, and create a series of "smart" playlists based on the clustered artists.

Installation

To install the AgentMusic for iTunes on a computer running Mac OS X, follow these steps:

- Quit the iTunes application
- Locate and open the iTunes folder in the Library folder in your Home folder
- Inside this folder, create a new folder named "Scripts"
- Place the script files in the newly created Scripts folder
- Launch iTunes. An iTunes Script menu displaying the script collection will now be available in the menu bar

System Requirements

AgentMusic for iTunes requires at least Mac OS X 10.1 or later and an internet connection is required when executing the scripts.
