

# Change Pitch of Song v2.0

AppleScript for iTunes

written by Peter Baxter, et al

this update by Doug Adams

Find more **free** AppleScripts  
and info on writing your own  
at Doug's AppleScripts for iTunes.

This script will use QuickTime to change the pitch of the selected iTunes track.

**This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. Click here for more info.**

## Installation:

**To manually install, if necessary:** Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

## How to use:

### From the author's email to me:

"With some help I've altered a script by Randal Schwartz so that it enables people to change the pitch of a song to make it easier to play, or sing along with."

Select a track and run the script; follow the prompts to set a pitch level in QuickTime. QTP7 will open the track's file and set the pitch in the A/V window.

## QuickTime Player 7...*NOT X!*

You **must** have QuickTime Player 7 installed--even if you have QuickTime Player X installed. QTPX does not yet have robust-enough AppleScript support to handle this script. QTP7 is installed from the Optional Installs folder on your Snow Leopard installation disc. It will be installed in your */Applications/Utilities/* folder.

**Caution: This script will not run on Tiger.**
