

Comments to Description v1.0

AppleScript for iTunes

Find more **free** AppleScripts and info on writing your own at Doug's AppleScripts for iTunes.

This script will copy the contents of the Comments tag to the Description tag and/or Long Description tag of the selected tracks.

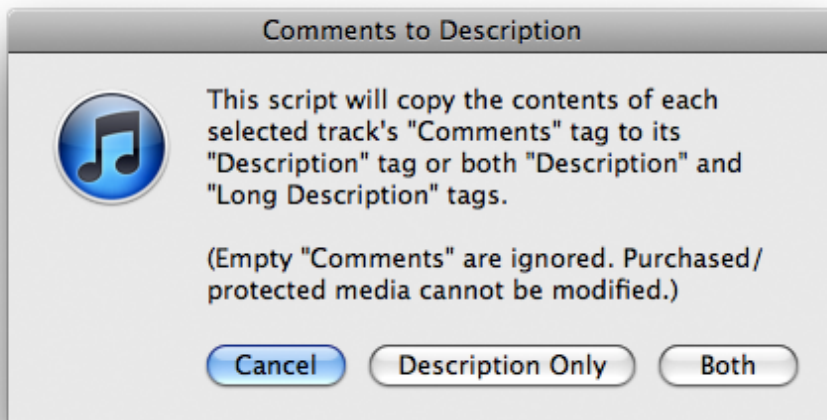

This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. [Click here for more info.](#)

Installation:

To manually install: Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

How to use:

Select some tracks and run the script. This screen will display:

Choose to copy the contents of the Comments tag of each selected track to the Description tag **only** or **both** Description and Long Description tags.

- Like the Comments tag, the Description tag can only have 255 characters.
- A track whose Comments tag is blank will be ignored and the Description and Long Description tags will not be modified.
- The Description and Long Description tags of purchased or protected media cannot be modified with this script. (Well, they *could* be, but the meta data from the file will just replace it again.)

- Not all media kinds support Description and Long Description tags.
