

Doug's Check for Update

v2.1

Universal, for macOS 11+
Find more free AppleScripts
and info on writing your own
at dougscripts.com.

This script will check if an AppleScript on your computer that has been downloaded from dougscripts.com has a newer version available.

Universal, for macOS 11 and later only.

Installation:

This script, "Doug's Check for Update", is an **AppleScript applet/droplet** and can be run by double-clicking its icon in the Finder **or** by dragging Finder items to its icon. Thus, it can be installed anywhere you find it convenient to access.

See the online Download FAQ for more info and video on downloading and installing AppleScripts.

How to use:

There are two ways to check if an AppleScript on your computer from **dougscripts.com** has a newer version available:

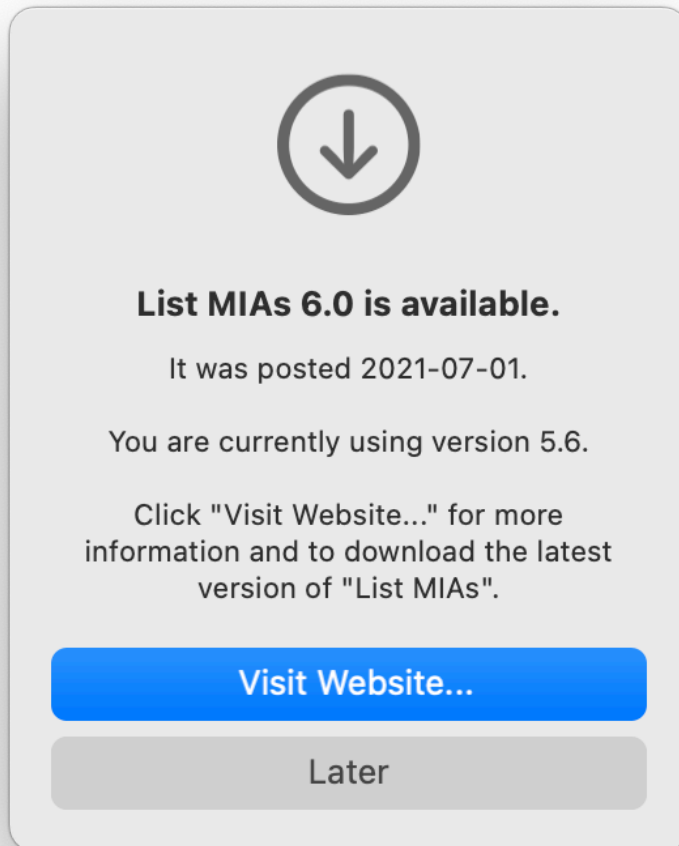

As a Droplet: Drag-and-drop a single AppleScript file you that want to check onto the "Doug's Check For Update.app" icon.

...or...

As an Applet: Launch the "Doug's Check For Update" script, by double-clicking its icon in the Finder. In the Open Panel that displays, navigate to the script on your computer that you want to check, select it, and then click the "Choose" button.

Only AppleScript file types ending with the extension “.sct”, “.scptd”, or “.app” will be recognized.

A dialog will report the results of the check:

Click the “Visit Website” button to open the script’s page at dougscripts.com in your default web browser.

- Some script applets already have a “Check for Update...” menu command, so using this applet with them may be superfluous.

Helpful Links:

Information and download link for this script is located at:
