Embed Disc Number in Track Number v1.0

AppleScript for iTunes
written by Miles Berry
Find more **free** AppleScripts
and info on writing your own
at Doug's AppleScripts for iTunes.

This script creates a new track number for each selected track combining the original track number and disc number such that the disc number becomes the "hundreds" digit of the track number (track number + 100 * disc number). Thus, disc 1 track 1 becomes track 101, disc 3 track 12 becomes track 312 etc. Where no disc number is given, the track number stays as is.

Helpful when using devices that may ignore the disc number tag so that tracks play in correct sequence.

Installation:

To manually install: Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

How to use:

Select some tracks and run the script. In a few moments, each selected track's **track number** tag will be updated.
