

# Export Artwork v2.0

## AppleScript for iTunes

Find more **free** AppleScripts  
and info on writing your own  
at Doug's AppleScripts for iTunes.

Save the artwork of the single selected track to a user-chosen folder as a PNG or JPG file, with scaling options. Default location is the folder containing the selected track's file, however any location can be selected.

*This script replaces the script "Save Artwork to Folder".*

This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. [Click here for more info.](#)

### Installation:

**To manually install:** Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

### How to use:

Select a single track which contains at least one artwork image and run the script.

- The first image of a track's Artworks is the **display artwork** (see the track's Get Info > Artwork tab). This is the image that will be exported as a file.

Choose a location to save the exported artwork file. The default location is the folder which contains the track's file. Or, if an iPod track is selected, your Desktop. Be that as it may, you can save the file anywhere else.

Next, you can select to scale the image. Enter a number of pixels between **16.0** and **600.0**. To skip scaling, click the "No Scaling" button.

In a few moments—depending on the speed of your machine—the image will be exported as a JPEG or PNG file to the location you selected. Optionally, you can view the file in Preview.
