

Export Selected Song List

v1.1

AppleScript for iTunes

Find more **free** AppleScripts
and info on writing your own
at Doug's AppleScripts for iTunes.

This script exports your choice of **title**, **artist**, **album**, **size**, and **time** of the selected tracks to the clipboard or to a text file (which you can open with TextEdit).

This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. [Click here for more info.](#)

Installation:

If you installed the files from the downloaded disk image by dragging them to the "Installer", then the AppleScript and this Read Me document have already been installed in your *[user name] > Library > iTunes > Scripts* folder. The script will appear in iTunes' Script menu, where you can activate it by clicking on its name.

To manually install, if necessary: Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

How to use:

Select the tracks you want to list and run the script. Select which tags you want listed. If you choose to export the list as a text file, enter a name and select a location for the text file; otherwise, your list will be exported to the clipboard so you can paste it wherever you like.

Editing the script (optional):

Currently, the "separator" is configured to be " - "; this is the text that appears between each tag you have selected, like so:

```
Pressure Drop - The Clash - Super Black Market Clash  
Capital Radio One - The Clash - Clash on Broadway  
Safe European Home - The Clash - Clash on Broadway
```

You can change this in the script. Open it in Script Editor. Near the beginning you will see this:

property separator : " - " -- this is what appears between items; try " " or tab (without quotes) also

Simply change whatever is between the quotes to what you'd prefer the "separator" to be, and

then Save the script.
