Import CD and Eject v2.0

AppleScript for iTunes

Find more **free** AppleScripts
and info on writing your own
at Doug's AppleScripts for iTunes.

This script will import enabled (checkmarked) CD tracks using your choice of available encoders. When finished, it will restore your Preferences-set encoder and eject the CD.

This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. Click here for more info.

Installation:

To manually install: Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

How to use:

• **Preparation** Set the "On CD insert" pop-up in iTunes General Preferences to "Show CD". Whenever a CD is mounted it will merely be displayed in iTunes. This will give you an opportunity to edit the tags of the CD tracks *before* importing them.

• Be sure each CD track you wish to import is enabled by putting a checkmark in its checkbox. By default, of course, they are already checked.

• Now run the script by selecting it in iTunes' Scripts Menu.

• Select which encoder to use. Your Preferences-set encoder is the default selection.

• **Unavoidably**, there will be a "done" chime after each track is imported. After the last CD track is imported, the CD will be ejected, and your original Preferences-set encoder will be restored.
