# Make An EQ Preset Script

## v3.0

For iTunes 11+/OS X 10.8+
Find more free AppleScripts
and info on writing your own
at Doug's AppleScripts for iTunes.

This script will create an AppleScript applet and when that script is run will re-create a selected EQ Preset in iTunes.

Convenient for sharing your EQ Presets accurately with your friends. Just send 'em the script.

OS X 10.8 and later only.

This script is Donationware. If you use it and like it please consider making a donation to support my AppleScripting efforts. Click here for more info.

## Installation:

Put AppleScripts in your iTunes "Scripts" folder. This is located in your *[user name] / Library / iTunes /* folder.

> *The user Library directory is hidden by default. To make it visible, hold down the Option key on your keyboard and select **Go > Library** from the Finder.*

If there is no folder named "Scripts" in the *[user name] / Library / iTunes /* folder then create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

**See the online** Download FAQ **for more info and video on downloading and installing AppleScripts.**

# How to use:

Launch the script by selecting it in the iTunes Script menu. It will display a list of your iTunes EQ Presets. Your current EQ will be pre-selected.

Select a Preset name from the list and click the "OK" button.

The script will get the settings of the selected EQ Preset and then create a **new script applet** saved to your **Desktop** folder. It will be called *Run to Create "NAME OF PRESET" EQ.app*. The name in quotes will always be the name of the EQ Preset you selected.

When this new script is launched–by double-clicking it's icon in the Finder–it will create a new EQ Preset in iTunes using the settings it got from your selected EQ.

You can email the new script to anyone with iTunes (on a Mac, of course) and they can run it to have your EQ Preset created in *their* iTunes.

You can also use this script to create "back-ups" of your EQs, in case you want to re-create them sometime later.
