

# Multi-Import v2.0

## AppleScript for iTunes

Find more **free** AppleScripts and info on writing your own at Doug's AppleScripts for iTunes.

Rip CD tracks using your selection of different encoders during the same session.

**This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. Click here for more info.**

### Installation:

Put AppleScripts in your iTunes Scripts folder. This is located in *[user name] > Library > iTunes*. If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

### How to use:

Select some CD tracks in iTunes and run the script. If you **don't** select any CD tracks, all the enabled (check marked) tracks of the selected CD will be imported.

The script will present you with a list of available encoders in a choose box (for reference, your current encoder is pre-selected). Select the encoders you want to use and click "OK".

You can then choose to assign the new tracks to discrete playlists based on the encoder used to import them.

- **To cancel the operation** click on the "x" in iTunes Activity Window.
- **The encoders chosen will use their most recent Importing Preference Settings.** It may be wise to check these settings before using the script.

When the operation is complete, your original Preferences-set encoder will be restored, and you optionally eject the CD.
