

Amazon Lookup

v2.0

For macOS 10.15+/Music v1.0+/Apple TV v1.0+
Find more free AppleScripts
and info on writing your own
at dougscripts.com.

This script will look at the current selected track and take you to Amazon's web page for that track's Album. If nothing is selected, it will default to the current playing track. If nothing is playing it will not run.

For macOS 10.15 and later only.

Installation:

To make an AppleScript available in **the Music app's** Script menu, install it in the Music "Scripts" folder. This is located at *[user name] / Library / Music / Scripts /*. **Music** will look for AppleScripts in this folder.

*The user Library directory may be hidden by default. To make it visible, hold down the Option key on your keyboard and select **Go > Library** from the Finder.*

If the *[user name] / Library /* folder does not contain the "Music" folder or "Scripts" folder, then create them and put the script in the "Scripts" folder. AppleScripts will then appear in the Music app's Script menu and can be activated by selecting by name and clicking.

Be sure to also save this Read Me document in a safe and convenient place.

See the online Download FAQ for more info and video on downloading and installing AppleScripts.

How to use:

Run the script while a track is selected or a track is playing. An Amazon search for the track's Album will be initiated using your default browser. (Note that searches are not always successful.)
