Not In Any Playlist

v4.1

For macOS 11+/Music v1.1+
Find more free AppleScripts
and info on writing your own
at dougscripts.com.

This applet will scan the Music app for tracks that are not assigned to any user-created playlists and list them.

For macOS 11 and later only.

This app is free to try in Demo Mode. In Demo Mode, only up to 10 tracks can be copied to a playlist per launch; other features are un-restricted. If you like it you can purchase a code for $2.99 which will unlock the 10 track restriction. Launch the app and click "Register…" in the its File menu to make an in-app purchase through PayPal.

Installation:

This script, "Not In Any Playlist", is an **AppleScript applet/droplet** and can be run by double-clicking its icon in the Finder **or** by dragging Finder items to its icon. Thus, it can be installed anywhere you find it convenient to access. However, it is probably best accessed from the Script menu of the Music app from where it can be launched by clicking its name.

To make an AppleScript available in **the Music app's** Script menu, install it in the Music "Scripts" folder. This is located at *[user name] / Library / Music / Scripts /* .

Music app will look for AppleScripts in this folder.

*The user Library directory may be hidden by default. To make it visible, hold down the Option key on your keyboard and select **Go > Library** from the Finder.*
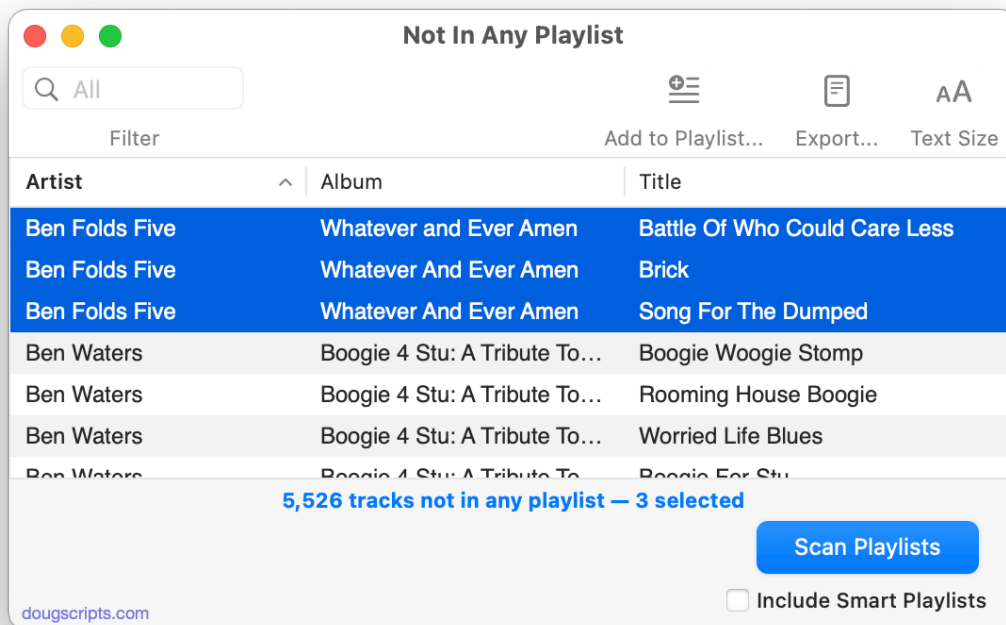

If the *[user name] / Library /* folder does not contain the "Music" folder or "Scripts" folder, then create them and put the script in the "Scripts" folder. AppleScripts will then appear in the Music app's Script menu and can be activated by selecting by name and clicking.

Be sure to also save this Read Me document in a safe and convenient place.

See the online Download FAQ **for more info and video on downloading and installing AppleScripts.**

How to use:

Launch the applet:

Click the **Scan Playlists** button to begin scanning the Music app for tracks that are not assigned to any **user-created** playlists (shared, Purchased, and Genius playlists are ignored).

• When the **Include Smart Playlists** checkbox is check-marked Smart Playlists will also be considered.

In a few moments, the number of tracks not in any playlists will be displayed as a list in the main window.

When the final listed results are displayed, these options become available via the **Toolbar**, the **File** menu or by **Right-Clicking** on a selection of items:

Show in Music   Select a single track and reveal it in Music.
Add to Playlist...   Copy the selected items to a new or existing Music playlist.
Export...   An XML text file of the listed items can be exported to a user-chosen location.
Remove from List   Remove selected items from the list. *(Does not affect tracks in Music.)*
Text Size   Toggles the text size of the listing

For more granular control of track display, use the **Filter** field to dynamically display tracks whose tags contain the entered text.

Quit the applet by pressing ⌘**Q**.
