

Search Tower Records

v1.0

For macOS 10.15+/Music v1.0+/
Find more free AppleScripts
and info on writing your own
at dougscripts.com.

This script will initiate a "search all" of the Tower Records website based on your choice of the Song Title or Artist or Album of the selected or playing Music app track. Results will be displayed in a new window in your default web browser.

For macOS 10.15 and later only.

Installation:

To make an AppleScript available in **the Music app's** Script menu, install it in the Music "Scripts" folder. This is located at *[user name] / Library / Music / Scripts /*. **Music** will look for AppleScripts in this folder.

*The user Library directory may be hidden by default. To make it visible, hold down the Option key on your keyboard and select **Go > Library** from the Finder.*

If the *[user name] / Library /* folder does not contain the "Music" folder or "Scripts" folder, then create them and put the script in the "Scripts" folder. AppleScripts will then appear in the Music app's Script menu and can be activated by selecting by name and clicking.

Be sure to also save this Read Me document in a safe and convenient place.

See the online Download FAQ for more info and video on downloading and installing AppleScripts.

How to use:

While a track is playing--or, if no track is currently playing, the selected track--launch the script and choose which tag, Title, Album or Artist, to use as the basis for a search of the Tower Records online site. The results, if any, will be displayed in your default browser.
