

# Copy Track Info to CD Tracks

## v2.0

For macOS 10.15+/Music v1.0+  
Find more free AppleScripts  
and info on writing your own  
at dougscripts.com.

Music has a "Replace Existing" option when users are re-importing CD tracks to replace existing tracks. The problem is that Music will only allow this option if the ID3 info for the CD tracks and the current Music tracks is identical. This script writes the writable info from selected tracks to the info of a CD; when you re-rip, the CD track data is already the way you want it.

For macOS 10.15 and later only.

This script is Donationware. If you use it and like it please consider making a donation to support my AppleScripting efforts. [Click here for more info.](#)

## Installation:

To make an AppleScript available in **the Music app's** Script menu, install it in the Music "Scripts" folder. This is located at `[user name] / Library / Music / Scripts /`. **Music** will look for AppleScripts in this folder.

*The user Library directory may be hidden by default. To make it visible, hold down the Option key on your keyboard and select **Go > Library** from the Finder.*

If the *[user name] / Library /* folder does not contain the "Music" folder or "Scripts" folder, then create them and put the script in the "Scripts" folder. AppleScripts will then appear in the Music app's Script menu and can be activated by selecting by name and clicking.

Be sure to also save this Read Me document in a safe and convenient place.

**See the online Download FAQ for more info and video on downloading and installing AppleScripts.**

## How to use:

Insert the CD you wish to rip. Then select the tracks of the corresponding album in the Music app. Launch the script. In a few moments the info will be copied.

- Make certain the tracks you select 1) have track numbers and 2) are in the correct Play order.
