

# Whack Current Track

## v2.1

For macOS 11+/Music v1.1+  
Find more free AppleScripts  
and info on writing your own  
at [dougscripts.com](http://dougscripts.com).

Deletes the currently playing track completely from the Music app and moves its file to the Trash. Works for tracks with local files only.

For macOS 11 and later only.

This script is Donationware. If you use it and like it please consider making a donation to support my AppleScripting efforts. [Click here for more info.](#)

## Installation:

To make an AppleScript available in your **Music** Script menu, install it in the Music "Scripts" folder. This is located at `[user name] / Library / Music / Scripts /`. **Music** will look for AppleScripts in this folder.

*The user Library directory may be hidden by default. To make it visible, hold down the Option key on your keyboard and select **Go > Library** from the Finder.*

If the `[user name] / Library /` folder does not contain the "Music" folder or "Scripts" folder, then create them and put the script in the "Scripts" folder. AppleScripts will then appear in the Music app's Script menu and can be activated by selecting by name and clicking.

Be sure to also save this Read Me document in a safe and convenient place.

**See the online Download FAQ for more info and video on downloading and installing AppleScripts.**

## How to use:

While a track is **playing** or **paused** (it must be a track for which there is a local file), launch the script. It will ask you to confirm that you want to delete the current track and Trash its file and then will do so.

Don't forget to add a keyboard shortcut!
