

# Track Down Purchases

## v3.8

For iTunes 11+/macOS 10.12+  
Find more free AppleScripts  
and info on writing your own  
at Doug's AppleScripts for iTunes.

This applet can examine the iTunes library and sort purchased audio and video tracks into discrete playlists by either the purchaser's **name** or **Apple ID** (eg: "Purchased by Jane Smith" or 'Purchased by janesmith@email.com") which in turn will be placed in a "Purchaser Playlists" folder playlist.

*This app is free to try in **Demo Mode**. While in Demo Mode, the number of tracks associated with each Purchaser will be reported but sorting tracks into playlists is **disabled**. A **\$1.99** in-app purchase of a registration code will enable playlist creation.*

For macOS 10.12 and later.

## Purchase a Registration Code for \$1<sup>99</sup>

Click "Register..." in the app's File menu right after launching, or use the form in the results window displayed in Demo Mode, and follow the prompts to purchase a code via PayPal. When your payment is processed, you will be emailed a registration code that will unlock the playlist creation feature.

## Installation:

This script is an **AppleScript applet** and can be run by double-clicking its icon in the Finder. However, it is probably best accessed from the iTunes Script menu.

Put AppleScripts in your iTunes "Scripts" folder. This is located at *[user name] / Library / iTunes / Scripts /*.

*The user Library directory is hidden by default. To make it visible, hold down the Option key on your keyboard and select **Go > Library** from the Finder.*

If the *[user name] / Library /* folder does not contain the "iTunes" or "Scripts" folders then then create them and put the script(s) in the "Scripts" folder. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

**See the online Download FAQ for more info and video on downloading and installing AppleScripts.**

## How to use:

Launch the app by clicking on its name in the iTunes Script menu or by double-clicking its icon in the Finder:

Select to sort purchased tracks by **Name** or **Apple ID**.

The applet will examine the iTunes library and report the number of tracks associated with each purchaser.

In addition, the **registered version** will sort the tracks into discrete playlists named with the Purchaser and then move each of these into a Playlist Folder named "Purchaser\_Playlists". On subsequent launches, these playlists will be re-created.

- **Only tracks with local files can be examined.** Dead tracks and un-downloaded purchased tracks or tracks in the cloud are ignored.
- **If you want to preserve the playlists created by the app,** move them out of the "Purchaser\_Playlists" folder playlist. This folder playlist will be re-created on each launch and the playlists it contains will be deleted (of course, the tracks remain in the library).
- **I suggest you run the app twice,** first By Apple ID and then By Name, preserving the playlists in each case; some files' metadata may be incomplete for one or the other.
- **Don't manipulate iTunes while the app is operating.** It may cause miscalculations.
