Whack Current Track v2.0

AppleScript for iTunes

Find more **free** AppleScripts
and info on writing your own
at Doug's AppleScripts
dougscripts.com

This script removes all copies of the **currently playing track** completely from iTunes and moves its file to the Trash. *Use carefully!*

This script is Donationware. If you use it and like it *please* consider making a donation to support my AppleScripting efforts. Click here for more info.

Installation:

To manually install: Put AppleScripts in your iTunes "Scripts" folder. This is located in *[user name] > Library > iTunes*.

> *As of OS X 10.7 (Lion), the user Library directory is hidden by default. Option-click the Finder's "Go" menu and select "Library" to make it visible.*

If there is no folder named "Scripts" there, create one and put the script(s) in it. AppleScripts will then appear in iTunes' Script menu, and can be activated by selecting by name and clicking. Be sure to also save this Read Me document in a safe and convenient place.

How to use:

While a track is playing, run this script. If it can, it will remove all copies of the track from iTunes (that is, the main library and any playlists it may reside in) and move its file to the Trash.
